Simple Login

A native Android login exercise with required-field feedback, fixed demo credential checks, explicit Intent navigation and sign out.

Assignment coverage

Form and feedback - EditText fields accept username/email and password. Blank fields show errors; incorrect credentials display feedback.

Credential validation - Public demo username: learner. Alternative email: learner@example.com. Password: Learn@123. Username/email ignores case and surrounding spaces; password matches exactly.

Navigation and sign out - An explicit Intent opens HomeActivity. Sign out clears the navigation stack and returns to empty input fields.

Run and review

Open the repository root in Android Studio. Install SDK 35 and Build Tools 35.0.0; use JDK 17 or 21. Sync Gradle, then run the login module on Android 8.0 / API 26 or later.

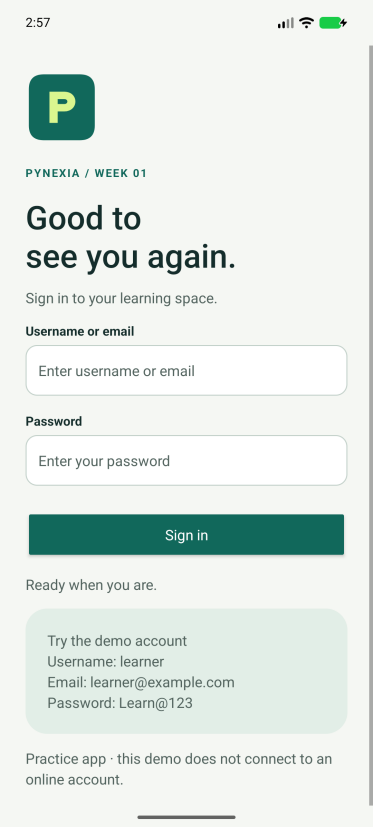

1. Submit empty fields, then incorrect credentials, to check feedback.
2. Sign in using learner and Learn@123.
3. Sign out; confirm the fields are empty and Back does not reopen the authenticated home.
4. Repeat using learner@example.com and the same password.

Scope

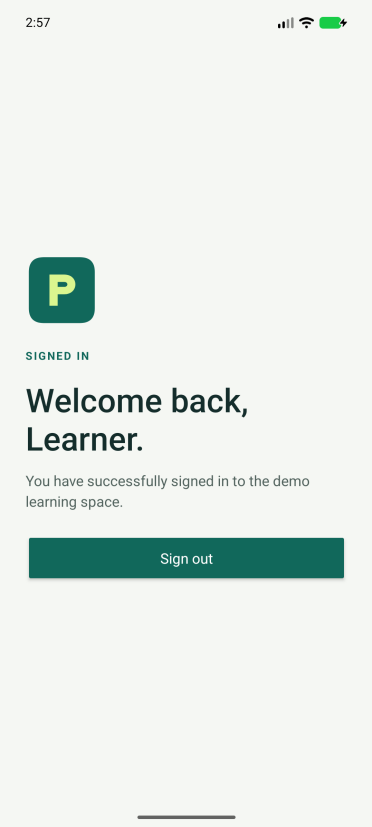

Fixed, deliberately public demo credentials. No production authentication or persistent session. Accounts created in the separate Sign-Up App do not work here. Autofill is disabled.

Actual app screens

Captured from the tested native Android application, not browser mockups.

Demo sign-in form

Home and sign out

Executed checks

JVM tests passed: 2 | Device tests passed: 1 | Lint errors: 0 | Lint warnings: 5

Two JVM tests cover credential rules. One device test exercises empty/incorrect fields, login by username and email, navigation and sign out.

Debug APK built and signature verified. Tests ran on a Pixel 8 emulator, Android 17 / API 37 (37.1 image), x86_64. Zero test failures, errors or skips. No physical-device or API 26 execution. Lint warnings are retained without suppression; inspect verification/ for the findings.

Reproduce

.\gradlew.bat :login:assembleDebug :login:testDebugUnitTest :login:lintDebug

.\gradlew.bat :login:connectedDebugAndroidTest

The second command requires a running emulator or connected device. APKs are debug-signed evaluation builds.

Explanation & submission

يعرض التمرين نموذج تسجيل دخول يتحقق من الحقول الفارغة ومن بيانات حساب تجريبي ثابت. عند نجاح التحقق ينتقل إلى الصفحة الرئيسية، وعند تسجيل الخروج يمسح مسار التنقل ويعيد النموذج فارغا. لا توجد مصادقة على خادم أو جلسة دخول دائمة.

للتجربة: استخدم اسم المستخدم وكلمة المرور المعروضين أدناه. اختبر أيضا الحقول الفارغة والبيانات الخاطئة وتسجيل الخروج. الحسابات التي تنشئها في تمرين التسجيل مستقلة ولا تعمل في هذا التمرين.

Repository URL

https://github.com/ENGEyad/pynexia-week1-login

Live Demo / Hosted URL

https://engeyad.github.io/pynexia-week1-login/

Hosted project showcase with real screenshots and APK/PDF downloads. It is not an in-browser Android emulator.

Attach File / Archive

Simple-Login-App.zip - includes source, APK, screenshots, verification and this report; below the 10 MB limit. PDF may also be attached separately. APK is inside the ZIP because the supplied form does not list APK as a direct attachment type.

Notes / Implementation Remarks (1316 / 2000 characters)

Native Android Simple Login App built with Java and XML using EditText, Button and TextView. Required-field validation and credential checks provide clear feedback. A successful login opens HomeActivity through an explicit Intent. Sign out clears the navigation stack and returns to an empty login form.

Demo credentials: username learner OR email learner@example.com; password Learn@123. Username/email matching ignores case and surrounding spaces; passwords must match exactly. This is a standalone educational demo with fixed public credentials, not a production authentication service. Accounts created in the separate Sign-Up App are not shared with this app.

Run: open the source folder in Android Studio, sync Gradle, and run login on Android 8.0/API 26 or later. Test empty fields, incorrect credentials, successful login by username/email and sign out.

Validation: debug APK built successfully; 2 JVM tests and 1 instrumentation test passed on a Pixel 8 emulator (Android 17/API 37). Lint completed with zero errors; warnings are documented. Source code, Gradle Wrapper, APK, screenshots and verification reports are included in the attached ZIP.

Hosted URL: project showcase with actual screenshots and APK/PDF downloads; not a browser emulator. The ZIP also includes a bilingual implementation report.
